(443) · 630 · 2698 ◇ hchen135@jhu.edu

SUMMARY

Johns Hopkins Computer Science PhD candidate with a background of deep learning in medical imaging, interpretable AI systems with human interaction and object segmentation and information extraction in gigapixel-level images. Excellent communication skills and ability to work on teams.

EDUCATIONS

Johns Hopkins University

Doctor of Philosophy, Computer Science

Advisors: Dr. Mathias Unberath, Dr. Gregory Hager

First author publications: 5 conference papers, 1 journal paper, 3 journal papers under review

Jan 2018 - Dec 2022 (expected)

Baltimore, MD, USA

Columbia University

Master of Arts, Statistics

Overall GPA: 4.1 / 4.0

Sep 2016 - Dec 2017

New York City, NY, USA

Fudan University

Bachelor of Science, Physics

Core GPA: 3.6 / 4.0

Sep 2012 - Jun 2016

Shanghai, CHINA

SKILLS

Python, C++, Linux, Slurm, Docker, PyTorch, Tensorflow, Matlab, R

INTERNSHIPS

Meta, Redmond

Research Intern

June 2022 - Aug 2022

Redmond, WA, USA

3D scene style transfer with 2D style image by differential rendering

- Internship performance exceeds director/mentor/peers' expectation in review.
- Learned style transfer, 3D mesh and rendering from scratch in one week.
- Utilized PyTorch3D & nvdiffrast as differential rendering to generate 2D views.
- Optimized texture maps by style transfer between 2D rendered images and style image.
- Preserved object style consistency by semantic style transfer.

NVIDIA, Bethesda

Applied Research Intern

May 2018 - Dec 2018

Bethesda, MD, USA

Deep Hierarchical Multi-label Classification of Abnormalities in Chest X-rays

- Paper accepted by MIDL 2019 with oral presentation.
- Special invitation to Journal "Medical Image Analysis" and paper accepted.
- Followed clinical taxonomy to construct hierarchical multi-label classification.
- Fit the extreme label imbalance dataset by a two-stage training procedure.
- Derived a numerically stable math formulation to avoid floating point underflow calculating loss.

PingAn, Bethesda

Applied Research Intern

May 2019 - Dec 2019

Bethesda, MD, USA

Anatomical symmetric learning for Fracture Detection in Pelvic Trauma X-ray

- Paper accepted by ECCV 2020 with poster presentation.
- Mimicked radiologists' practice by comparing vertical asymmetric areas via Siamese network.
- Aligned Siamese features according to GNN-detected pelvic structure landmarks.
- Learned anatomical asymmetry explicitly by novel pixel-wise contrastive loss.

PingAn Technology, Shanghai

Data Mining Scientist Intern

May 2017 - Aug 2017

Shanghai, CHINA

Lung nodule detection in CT scans

- Top 6 out of 2887 teams in the Skylake competition sponsored by Intel and Alibaba.
- Applied PyTorch, 3D UNet and Caffe, Faster RCNN to detect lung nodules in 1000 CT scans.
- Used fusion method to reduce false positives.

Direct Gene Expression Profile Prediction for Uveal Melanoma from Digital Cytopathology Images via Deep Learning and Salient Image Region Identification. **Ophthalmology Retina (IF=8.5)** *under second-round review*.

AWARDS

National College Students Mathematics Competition, National Silver Medal.	<i>Oct 2013</i>
National College Students Mathematics Model Contest, the third prize of Shanghai.	<i>Oct 2014</i>
Second-class scholarship of Fudan University.	<i>May 2015</i>
Mensa Member in China.	<i>May 2016</i>
