SUMMARY

Johns Hopkins Computer Science Ph.D. candidate with a background in interpretable computer vision systems with human-computer interaction, image classification, object detection, and segmentation. First author of Nature partner journal paper. Excellent communication skills and ability to work on teams. Interested in and willing to work in any Computer Vision field.

EDUCATIONS

Johns Hopkins University

Jan 2018 - Dec 2022 (expected)

Doctor of Philosophy, Computer Science

Baltimore, MD, USA

Advisors: Dr. Mathias Unberath, Dr. Gregory Hager

First author publications: 5 conference papers, 2 journal papers, 2 journal papers under review

First author of one Nature partner journal paper

Columbia University

Sep 2016 - Dec 2017

Master of Arts, Statistics

New York City, NY, USA

Overall GPA: 4.1 / 4.0

Fudan University

Sep 2012 - Jun 2016

Bachelor of Science, Physics

Shanghai, CHINA

Core GPA: 3.6 / 4.0

SKILLS

Python, C++, Linux, Slurm, Docker, PyTorch, Tensorflow, Matlab, R

INTERNSHIPS

Meta, Redmond

June 2022 - Aug 2022

Research Intern

Redmond, WA, USA

3D scene style transfer with 2D style image by differential rendering

- Internship performance exceeds director/mentor/peers' expectation in review.
- Learned style transfer, 3D mesh and rendering from scratch in one week.
- Utilized PyTorch3D & nvdiffrast as differential rendering to generate 2D views.
- Optimized texture maps by style transfer between 2D rendered images and style image.
- Preserved object style consistency by semantic style transfer.

NVIDIA, Bethesda

May 2018 - Dec 2018

Applied Research Intern

Bethesda, MD, USA

Deep Hierarchical Multi-label Classification of Abnormalities in Chest X-rays

- Paper accepted by MIDL 2019 with oral presentation.
- Special invitation to Journal "Medical Image Analysis" and paper accepted.
- Followed clinical taxonomy to construct hierarchical multi-label classification.
- Fit the extreme label imbalance dataset by a two-stage training procedure.
- Derived a numerically stable math formulation to avoid floating point underflow calculating loss.

PingAn Technology, Bethesda

Applied Research Intern

May 2019 - Dec 2019

Bethesda, MD, USA

Anatomical symmetric learning for Fracture Detection in Pelvic Trauma X-ray

- Paper accepted by ECCV 2020 with poster presentation.
- Mimicked radiologists' practice by comparing vertical asymmetric areas via Siamese network.
- Aligned Siamese features according to GNN-detected pelvic structure landmarks.
- Learned anatomical asymmetry explicitly by novel pixel-wise contrastive loss.

PingAn Technology, Shanghai

Data Mining Scientist Intern

May 2017 - Aug 2017

Shanghai, CHINA

Lung nodule detection in CT scans

- Top 6 out of 2887 teams in the Skylake competition sponsored by Intel and Alibaba.
- Applied PyTorch, 3D UNet and Caffe, Faster RCNN to detect lung nodules in 1000 CT scans.
- Used fusion method to reduce false positives.
